

Communication. Performance. Quality.

PrintJet CONNECT

WORKPLACE
SOLUTIONS

Weidmüller 

Your direct connection to an optimal marking process

PrintJet CONNECT – the communication-capable high-performance printer

Marking processes today must be as fast, reliable, efficient, and flexible as possible. At the same time, the user expects an all-around perfect print result. The best way to achieve this is to use a single marking system with coordinated software, printer, and marker that perfectly covers all requirements.

With the PrintJet CONNECT we have developed a high-performance inkjet printer which exceeds these requirements. The PrintJet CONNECT is the consequent advancement of our well-proven PrintJet series. Designed to meet the modern requirements of industry and control cabinet construction, it combines maximum process and cost efficiency with intelligent networking and complete data consistency. For example, you can use existing data directly for marking – for more efficient work with fewer failures.

With Weidmüller, you have a powerful partner at your side who supports you with optimally coordinated solutions for your workshop in all phases. Based on many years of practical experience in all aspects of control cabinet construction, we offer you a comprehensive portfolio with which you can effectively accelerate your processes and increase your quality.

Discover your optimisation potential now:
www.weidmueller.com/workplace

The PrintJet CONNECT is part of the Weidmüller marking system consisting of software, markers and printers. It has a particularly durable industrial print head and was designed primarily for the fast marking of medium to large quantities and for continuous operation.

The PrintJet CONNECT is suitable for printing all plastic or metal markers of the MultiCard or MetalliCard family. It achieves brilliant printing results with high durability on all media.

Simply better and more economically thanks to excellent connectivity

The PrintJet CONNECT uses IoT to optimise marking

Communication-capable devices, components, and systems are the key for exploiting the entire benefits of Industry 4.0. This also applies to a more efficient implementation of marking processes. The PrintJet CONNECT offers you all the advantages of connectivity. On the one hand you can use existing data for the marking process, and on the other hand you benefit from the possibility of permanently monitoring the status and functionality of the printer regardless of your location. This ensures availability and saves a lot of time, money, and trouble.

Two options are available for networking the PrintJet CONNECT: classic via LAN or wireless via WLAN. The latter is done by using the supplied WIFI stick. The M-Print® PRO software enables you to use existing data, for example from EPLan, WS-CAD, or Zuken e3. In addition, print files can also be loaded directly into the printer via USB stick. This allows the printer to be operated without a PC or network.

Discover the advantages of the PrintJet CONNECT

Trendsetting solutions for an optimal marking process

Perfect durable printing results

The industrial print head of the PrintJet CONNECT is extremely robust and reliable. It provides perfect printing results and is characterised by an extremely long service life.

Economical printing of even the shortest of runs

The PrintJet CONNECT is also able to print half MultiCards. This means that even the smallest of runs, corrections, etc. can be produced economically and without unnecessary waste.

Process different markers in one job

The PrintJet CONNECT processes different formats in one print job. This means that even if different markers are used in a print job, there is no need for a time-consuming change of the print media. Up to 50 different MultiCards can be inserted into the tray.

Optimal support during operation

The PrintJet CONNECT provides users with wide-ranging, easy-to-understand support in the form of graphics, videos, web or QR codes, and links to information on the web. All information can be easily selected and called up via the 7" touch display, enabling even employees who rarely work with the printer to quickly familiarise themselves with its operation.

Perfect print quality even on large markers

PrintJet CONNECT can be used to print graphics or full-surface printouts at a high level of quality. The preheating of the print medium enables optimum ink flow control and a uniform print result even with large-area prints.

Flexible printer placement and excellent accessibility

The new design of the PrintJet CONNECT allows flexible positioning of the printer. Due to its 180° rotatable display, the front-side placed trays, and the large service flap, there is easy access for operation and maintenance in every positioning variant.

Maintenance-friendly design of the printer

Print speed of more than 2 MultiCards per minute

Automatic calibration of the MultiCard

Automatic stacking function enables First in - First out

PrintJet CONNECT - the new state of the art printer

Technical details that will convince you

Perfectly centered prints without manual adjustment

The PrintJet CONNECT automatically adjusts itself to size tolerances of the print media and thus enables perfect centering of the print on each marker. Because marker cards can expand depending on humidity and temperature, a sensor in the printer determines the exact size of the card and corrects the print values so that all markers are printed evenly.

Convenient printing of large volumes

Printing huge quantities is made much easier by the high printing speed and the large output tray. The PrintJet CONNECT prints more than 2 MultiCards per minute and has a large output tray with automatic stacking function for up to 50 cards.

Reliable even after long periods of storage

The print head of the PrintJet CONNECT can be quickly made ready for use again even after a long period of storage. For this purpose, the ink cartridges are replaced with fluid cartridges for storage, which protect the print head from drying out.

Unify processes by high output

Due to its high printing speed, the PrintJet CONNECT is also suitable for printing large quantities of markers. For example, up to 26,000 DEK 5/5 terminal markers, 10,000 TM-I conductor markers, or 5,000 ESG device markers can be printed per hour. The high throughput permits print jobs to be concentrated on one printer, resulting in process standardisation.

Benefit from optimal IT security

The printer's integrated IPC works with the proven WIN 10 IoT operating system, which enables the installation of the security updates periodically provided by Weidmüller.

Optimal support for service

The comprehensive documentation function of the PrintJet CONNECT creates informative log files and enables targeted support of the service technicians on site as well as during remote maintenance. This avoids having to send the printer to the nearest Weidmüller service hub for simple service work.

Optimal support for maintenance

The comprehensive monitoring functions of the PrintJet CONNECT enable predictive maintenance and ensure reliable operation. The printer records and stores operation-relevant parameters such as power supply, ink consumption, service life, air humidity, room temperature, etc., and warns users quickly of errors and abnormal deviations. Corresponding messages are shown on the display or via the M-Print® PRO software or sent by e-mail.

The advanced inkjet printer

Our PrintJet CONNECT for the highest standards

Your direct connection to the optimal marking process

The PrintJet CONNECT is the consistent further development of our tried-and-tested PrintJet series. Focusing on the modern needs of industry and panel building, it combines maximum process and cost efficiency with intelligent networking and complete data consistency. For example, you can use existing data directly in the marking process – for working more efficiently and with a minimal error rate. The PrintJet CONNECT is part of the Weidmüller marking system consisting of software, markers and printers. It has an extremely durable industrial print head and has been specially optimised for fast working speed and high throughput.

Your advantages at a glance:

- Perfect printing results every time
- Durable and robust markers thanks to thermal fixing
- Fast handling of large volumes
- High level of automation thanks to magazine capacity of 50 MultiCards
- Flexible connection possibilities via LAN, WIFI or USB
- Simple status monitoring on the device
- User-friendly operation thanks to intuitive touch display

Technical data

Description		
Intended use	Printing Weidmüller MultiCards and MetalliCards	
Technology	Inkjet procedure with integrated thermal fixing unit	
Feed	Automatic magazine for max. 50 MultiCards Individual feed for MetalliCards and MultiCards	
Removal	Automatic dispenser magazine for up to 50 MultiCards	
Fuses	10 ATH 250 V	
Application site	Office conditions	
Ambient temperature	18 °C - 30 °C 50 °F - 95 °F

Smart marking systems

Innovative solutions across all industries

The precisely coordinated systems fit perfectly into the environment and processes of your industry.

Robust material

Plastic that doesn't come in small sizes. Our markers counter vibration and other long-term effects with unique strength and robustness.

- Elevator and Escalator
- Railway

Heat-tested

Markers, which love the extreme. High temperatures, as experienced in many industrial environments, are easily withstood by our markers.

- Wind
- Traditional Power

Detectable

Thanks to a metallic filling material, our detectable markers are identifiable by metal and X-ray detectors.

- Consumer Goods and Packaging
- Food industry

Resistant to chemicals

Long-term legibility. Our markers are resistant to all common industrial cleaning agents.

- Automotive and Robotics
- Oil and Gas

Further marking systems and more technical details can be found in our online catalog.

Let's connect

MultiCard

The complete range

Weidmüller has established a new market standard with its MultiCard product line. With over 250 types, this product line has been consistently broadened to cover all of your application requirements. And if you need something special, we'll design a customised solution for you.

Terminal Markers

Whether multi-character labelling or markers with individual printing, whether white or coloured or group designations at terminals, the comprehensive range of Weidmüller products solves every marking task simply, quickly and clearly.

Wire and Cable Markers

The applications range from thin wires through to cables with large external diameters. Amongst others, the assortment includes combination systems with individual tags, transparent sleeves and markers that are fastened using cable ties.

Device Markers

Device and installation markers round off the range of switchgear markers. By utilising Weidmüller's device markers, users comply with official regulations requiring marking of electrical equipment. Weidmüller offers corresponding markers for devices made by well-known manufacturers. Mirroring their original counterparts, these tags are attached with the traditional adhesive or rapid clip-on techniques.

Technical data MultiCard V2

Material	Polyamid 66, Halogen-free
Fire class acc. to UL 94	V2
Temperature range	-40 °C to 100 °C
Temperature range	-40 °C to 60 °C (Self-adhesive)
Approved air humidity	Max. 60 %, only for screwable markers

Technical data MultiCard V0

Material	Polyamid 66, Halogen-free
Fire class acc. to UL 94	V0
Temperature range	-50 °C to 120 °C

Technical data detectable markers

Material	PA 6.6, Halogen-free
Fire class acc. to UL 94	HB
Temperature range	-40 °C to 100 °C

Weidmüller – Your partner in Industrial Connectivity

As experienced experts we support our customers and partners around the world with products, solutions and services in the industrial environment of power, signal and data. We are at home in their industries and markets and know the technological challenges of tomorrow. We are therefore continuously developing innovative, sustainable and useful solutions for their individual needs. Together we set standards in Industrial Connectivity.

We cannot guarantee that there are no mistakes in the publications or software provided by us to the customer for the purpose of making orders. We try our best to quickly correct errors in our printed media. All orders are based on our general terms of delivery, which can be reviewed on the websites of our group companies where you place your order. On demand we can also send the general terms of delivery to you.
